PROFESSIONAL EXPERIENCE

Plivo
Software Engineer II

Bengaluru, India
Nov 2024 – Present

- Built **Vibe Agent**, a Claude Code-like agentic system for building, simulating, evaluating, and improving voice AI agents, cutting production-ready setup from **~5 days to ~20 minutes**.
- Architected detachable builder runs that execute as server-owned async background tasks decoupled from the request, surviving client disconnects via per-turn PostgreSQL snapshots and cursor-based replay over Redis Streams.
- Developed **Truman**, a voice AI agent testing system that runs automated calls in parallel across hundreds of AI-generated caller personas and auto-generated use-case-specific scenarios, with agent skills, a CLI, and failure diagnostics.
- Built the distributed simulation & evaluation engine powering it, fanning out each test case as an SQS message to Go worker pools with at-least-once delivery, dead-letter queues, and Redis + Lua atomic barriers coordinating fan-in completion across workers.
- Fine-tuned the barge-in detection model, reducing false interruptions by **95%** in voice-agent conversations.
- Built **Akhada**, a debugging and evaluation environment for testing every layer of a voice AI agent (VAD, EoU, STT, LLM, TTS, prompts, configs, and agent behavior) in an isolated environment before production.
- Implemented agent versioning with rollback support and autogenerated change summaries, enabling users to improve voice AI agents without affecting live production agents.

Quinence
Software Engineer

Singapore, Remote
June 2022 – Nov 2024

- Led redevelopment of Fuschia Careers' high-volume ATS and talent pipeline, improving functionality, performance, reliability, and recruiter workflows; integrated LLM-assisted features.
- Built **Modern Fullstack**, an interactive personalized tech training platform, using Remix, GraphQL, PostgreSQL/Supabase, AWS, and Cloudflare; mentored interns.
- Built The Soulless Citadel's NFT marketplace and minting contracts with bids, listings, fiat payments, discount logic, **2,200+** transactions, and **~\$368,940** in sales.

PERSONAL PROJECTS

Suniye

[Try Now](#) (500+ downloads) • [Source](#)

- Privacy-first native macOS dictation app in Swift with Apple Speech and a curated offline ASR model catalog (sherpa-onnx), **sub-210ms** transcription latency, and no cloud audio processing.
- Production stack includes Apple Intelligence / local Gemma transcript cleanup, resilient Core Audio capture, vocabulary learning from corrections, and a pseudonymous usage analytics system with durable offline queueing, Cloudflare ingest, Analytics Engine, and D1.

GitaGPT

[Visit](#) • [Download](#) (10k+ downloads) • [Source](#)

- Created a viral AI advisor that answers life questions through the lens of The Bhagavad Gita, reaching **13M+ views** and **120k+ users**. Featured in [TimesNow](#), [Economic Times](#), [News18](#), [MoneyControl](#). Tech: Next.js, React Native.

JUMS Reboot

[Download](#) • [Source](#)

- Developed this highly-rated app (**1,000+ downloads**, **5-star rating**) for Jadavpur University students, enabling instant access to admit cards, grade cards, and exam schedules. Tech: Flutter, Node.js, Express.js, Puppeteer.

SKILLS

Focus AI Agents, Voice AI, Agent Simulation, Agent Evaluation, LLM Fine-tuning, Agent Harnesses, Distributed Systems
Stack Python, FastAPI, TypeScript, Node.js, PostgreSQL, Redis, AWS, SQS, Lambda, Cloudflare, GraphQL, Supabase, React, Next.js

EDUCATION

Jadavpur University
Bachelor of Engineering • CGPA 8.77

Kolkata, India
2018 – 2022

ACHIEVEMENTS

- [Won](#) Plivo's internal "Plivo for Agents, Plivo by Agents" AI agent hackathon (24 hours, ~50 engineers).
- [Winner team](#) in HooHacks 2021 hackathon by MLH and the University of Virginia.
