PROFESSIONAL EXPERIENCE

Plivo Bengaluru, India
Software Engineer II Nov 2024 – Present

- Built **Vibe Agent**, a Claude Code-like agentic system for building, simulating, evaluating, and improving voice AI agents, cutting production-ready setup from **~5 days to ~10 minutes**.
- Fine-tuned and deployed Qwen-family models end to end for a voice AI use case, covering dataset generation and validation, LoRA training, LLM-judge evaluation, FP8 quantization, and vLLM serving; achieved a **0.97 judge score at 194ms**.
- Architected Vibe Agent so each build runs as a server-owned background task that survives client disconnects and resumes mid-turn with zero lost sessions, via per-turn PostgreSQL snapshots and cursor-based replay over Redis Streams.
- Developed **Truman**, a voice AI agent testing system that runs automated calls in parallel across **100s** of AI-generated caller personas and auto-generated use-case-specific scenarios, with agent skills, a CLI, and failure diagnostics.
- Engineered Truman's distributed simulation & evaluation engine, fanning out each test case as an SQS message to Go worker pools with at-least-once delivery, dead-letter queues, and Redis + Lua atomic barriers coordinating fan-in completion.
- Fine-tuned the barge-in detection model, reducing false interruptions by **95%** in voice AI agent conversations.
- Designed **Akhada**, a debugging and evaluation sandbox for testing every layer of a voice AI agent (VAD, EoU, STT, LLM, TTS, prompts, configs, and agent behavior) before production.
- Implemented agent versioning, rollback, and autogenerated change summaries for safe production iteration.

Quinence Singapore, Remote
Software Engineer Jun 2022 – Nov 2024

- Led redevelopment of Fuschia Careers' high-volume ATS and talent pipeline, improving performance, reliability, and recruiter workflows; added LLM resume autofill that cut per-resume processing time from **~30 minutes to ~2 minutes**.
- Shipped **Modern Fullstack**, an interactive personalized tech training platform, using Remix, GraphQL, PostgreSQL/Supabase, AWS, and Cloudflare; mentored interns.
- Launched The Soulless Citadel's NFT marketplace and minting contracts with bids, listings, fiat payments, discount logic, **2,200+** transactions, and **~\$369K** in sales.

PERSONAL PROJECTS

Suniye [Try Now](#) (500+ downloads) · [Source](#)

- Privacy-first native macOS dictation app in Swift with Apple Speech and a curated offline ASR model catalog (sherpa-onnx), a p50 transcription latency of **210ms**, and no cloud audio processing.
- Production stack: Apple Intelligence / local Gemma transcript cleanup, resilient Core Audio capture, vocabulary learning from corrections, and pseudonymous analytics with durable offline queueing (Cloudflare Analytics Engine + D1).

GitaGPT [Visit](#) · [Download](#) (10K+ downloads)

- Created a viral AI advisor that answers life questions through the lens of the Bhagavad Gita, reaching **13M+ views** and **120K+ users**. Featured in [TimesNow](#), [Economic Times](#), [News18](#), [MoneyControl](#). Tech: Next.js, React Native.

JUMS Reboot [Download](#) · [Source](#)

- Built JUMS Reboot for university students, reaching **1K+ downloads** and a **5-star rating**.

SKILLS

Focus AI Agents, Voice AI, Agent Simulation, Agent Evaluation, LLM Fine-tuning, Agent Harnesses, Distributed Systems

Stack Python, Go, TypeScript, Node.js, FastAPI, PostgreSQL, Redis, GraphQL, Supabase, AWS, SQS, Cloudflare, React, Next.js

EDUCATION

Jadavpur University Kolkata, India
Bachelor of Engineering · CGPA 8.77 2018 – 2022

ACHIEVEMENTS

- [Won](#) Plivo's internal "Plivo for Agents, Plivo by Agents" AI agent hackathon (2026; 24 hours, ~50 engineers).
- [Won](#) Best Finance Hack (Capital One prize) at HooHacks 2021, an MLH hackathon.
